Feature Demo:

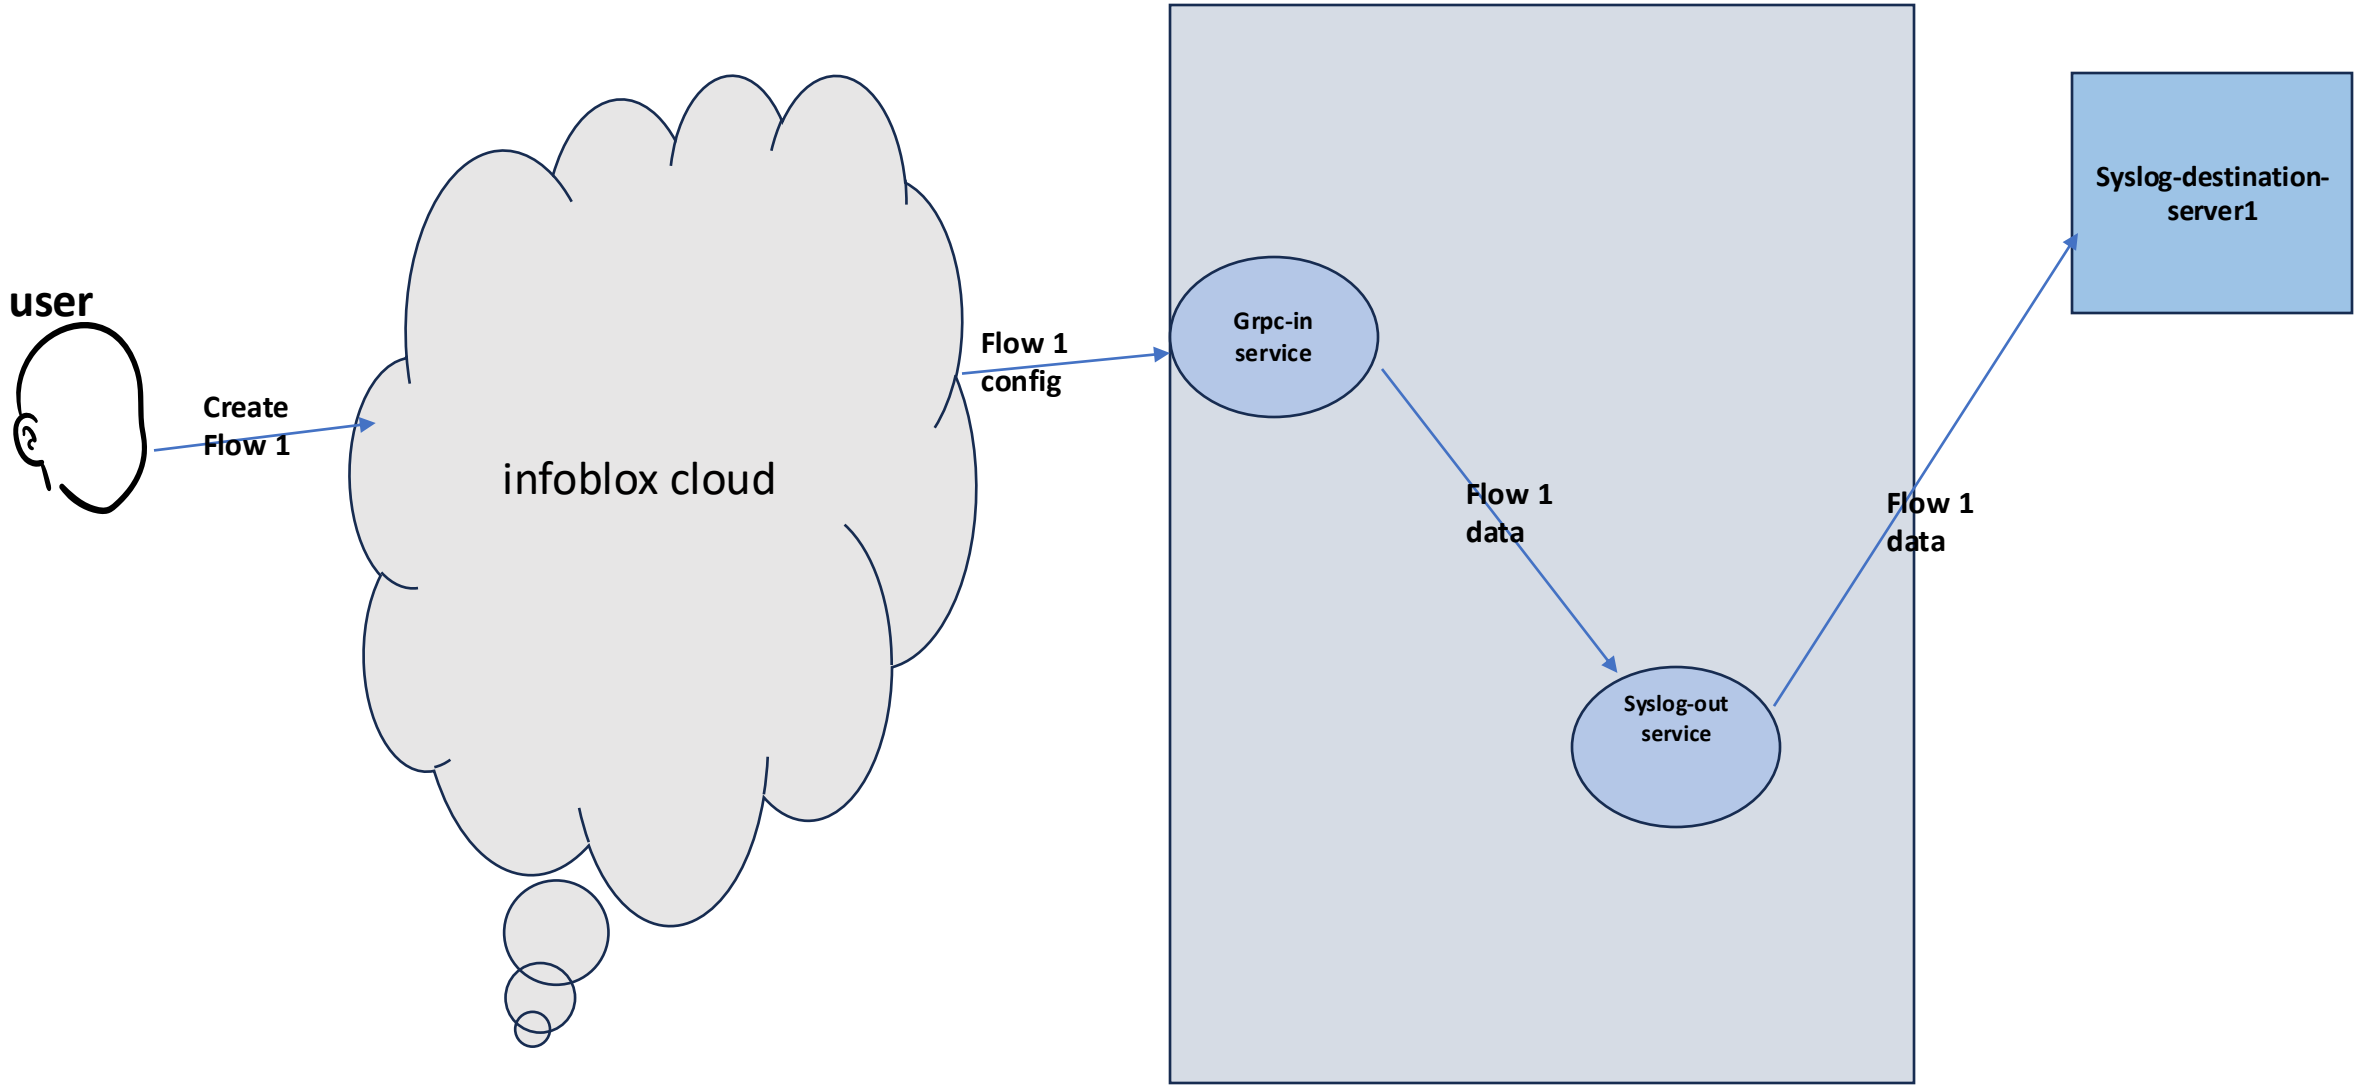
Multiple Traffic Flow Support

Feature Objectives

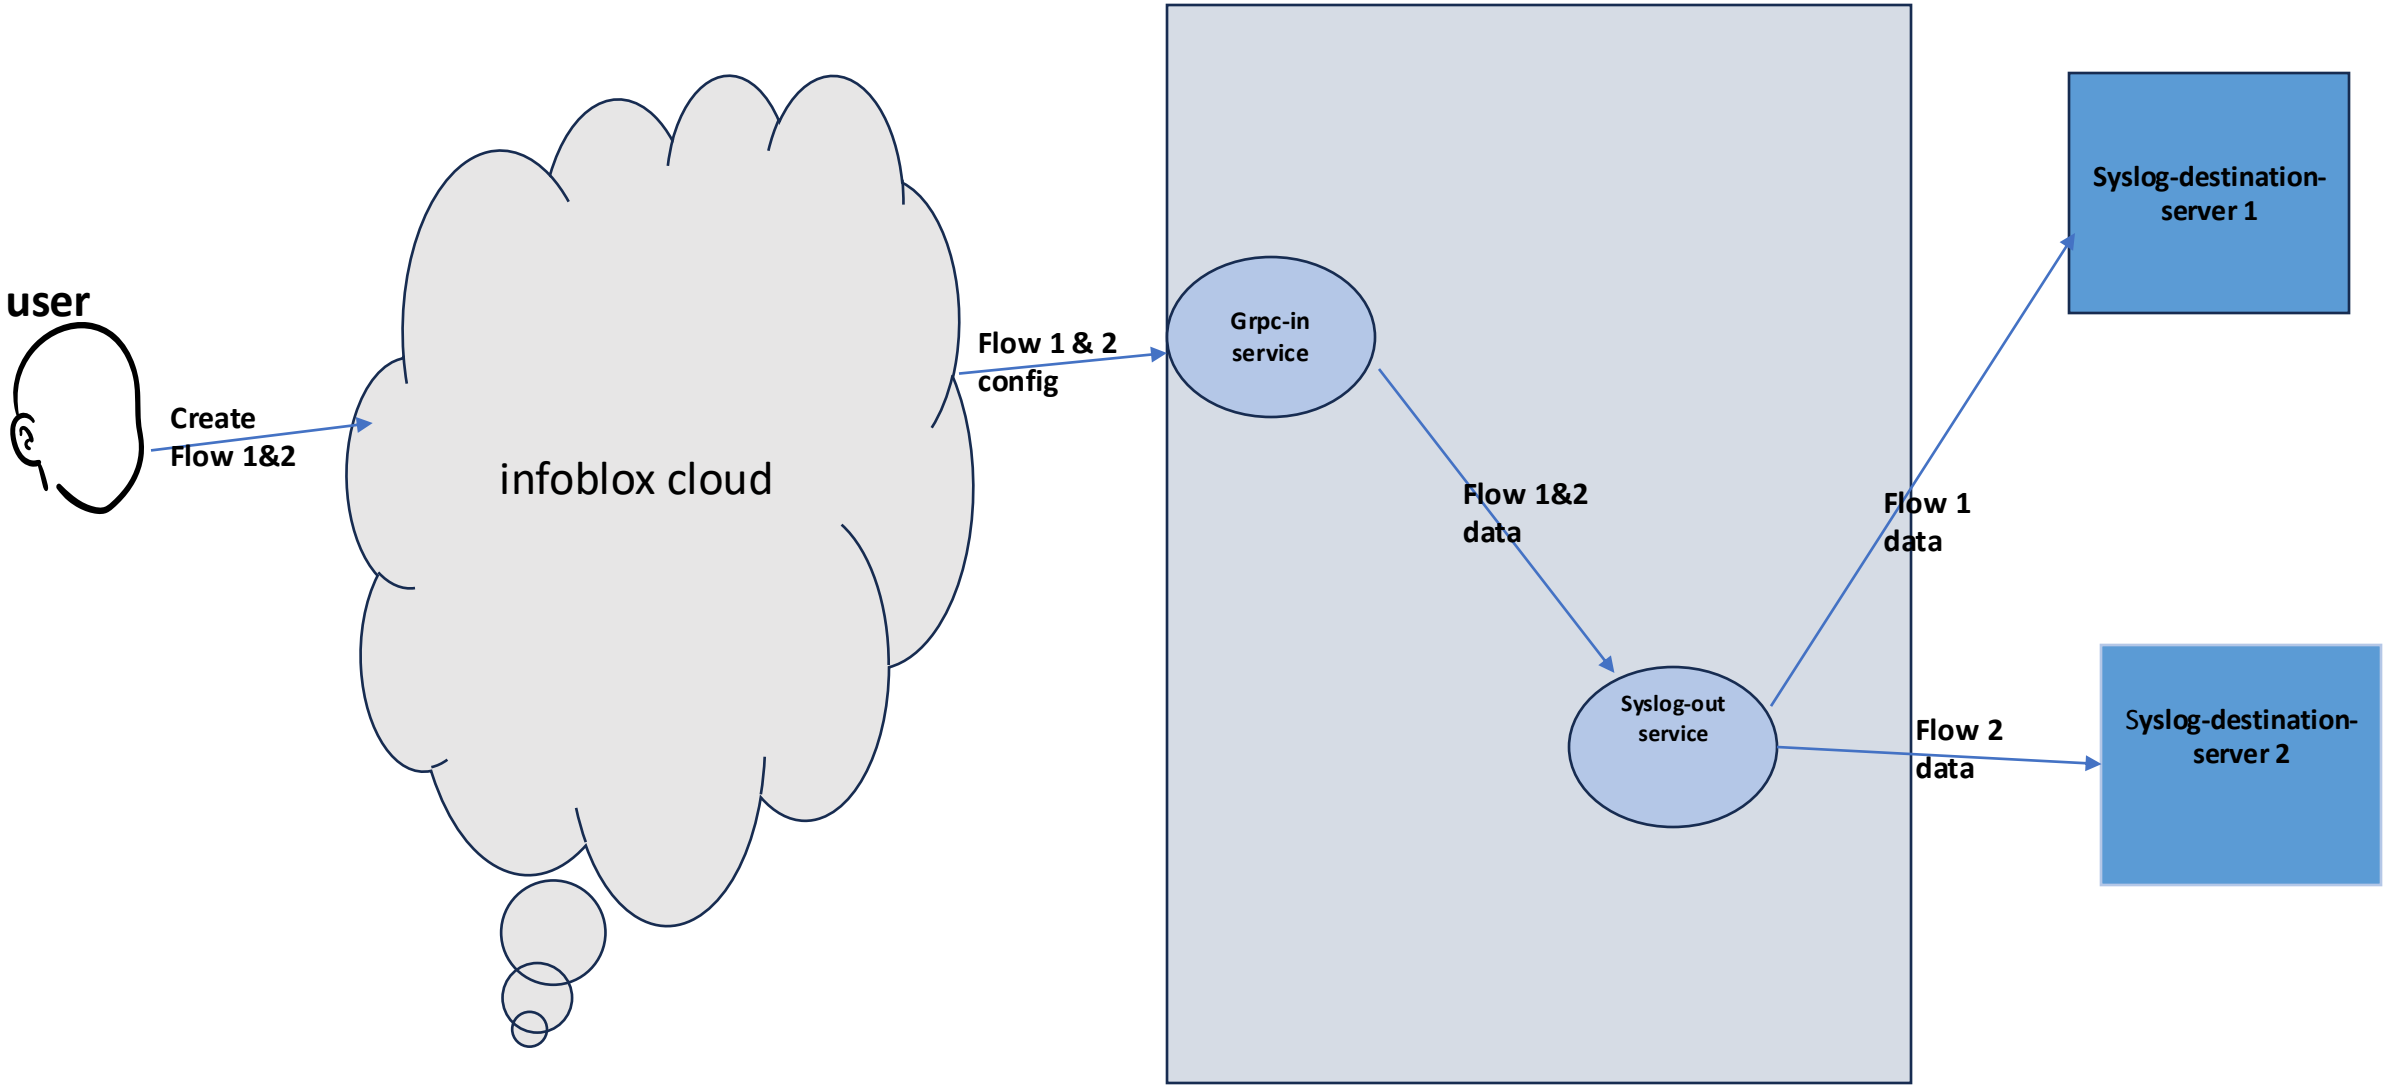
- Currently CDC doesn't support multiple traffic flows to the same destination type on the same On Prem Host
- It is required by some customers to send traffic to multiple destinations of the same type
- **This feature implements support for creating multiple flows of same type (syslog and http-out) on the same onprem host**

Multiple Traffic Flow Support: syslog-out flows

syslog-out flows : Existing implementation



syslog-out flows : New implementation



Multiple Traffic Flow Support: syslog-out flows DEMO
